

DEPRAG is an Assembly Equipment manufacturer with over 65 years experience. Our headquarter is located in Amberg, Germany, where over 350 active staff members design, manufacture and distribute handheld air tools, automatic feeding and assembly systems. DEPRAG's worldwide net covers over 30 countries. The North American subsidiary is located in Lewisville, Texas, providing Mexico, Canada and the Continental US with quality air-tools and excellent service. Our Rep Agencies are located throughout the US, Canada and Mexico. For our Canadian customers, a separate Service/Repair Agency is available.

The most outstanding feature of our handheld screwdrivers is the guaranteed $\pm 3\%$ torque accuracy and a truly ERGONOMIC design. Our torque capacity ranges from 3 inch ounces to over 4400 inch pounds, no matter whether the configuration is inline, pistolgrip or 90° angle-head.

The noise level of most screwdrivers is below 65 dB(A) and the air consumption rates are the lowest available on the market.

DEPRAG offers specialized Screwdrivers for critical applications, such as: cycle counting; driving torque higher than final seating torque; left rotation (recycling tools), assembly to depth; and many other options. A full line of Screwdriver Accessories, such as Bits, Finders, Sockets, Balancers, Filter/Lubricators, Hoses, Torque-Arms and Screwdriver Stands are available from stock.

Our standard Screwdrivers can easily be integrated into handheld Screwfeeding Machines.

DEPRAG is the only manufacturer to supply, in addition to a Single-Screwfeeder, a Twin-Screwfeeding Machine, where two Operators work independent from each other, out of one Feederbowl. For fully automated systems, we offer Single- and Multi-Spindle Screw Assembly Machines, with- or without feeding.

DEPRAG
