Partner for complete solutions

Range of services

Wide-ranging expertise

Engineering and Consulting

We exercise great care and are in close cooperation with you when developing a technically advanced and economical solution for your production tasks.

From standard devices up to customised unique solutions, we provide products for the entire application spectrum of sophisticated screwdriving and assembly systems – always with world-class standards of quality.

We provide comprehensive advice and support. After project close-out, you will have a concept which enables efficient, economic production with outstanding flexibility, despite fluctuating production numbers.

Production

In keeping with our long-established tradition, we have a highly developed scope of in-house production. We endeavour to offer high-grade technology for all product areas. Only the most sophisticated machines and latest technologies can efficiently produce the precision parts needed today.

Qualified specialists, diverse and sophisticated machine tools, cutting-edge 3D-NC programming and our quality certification according to DIN EN ISO 9001, all guarantee an uninterrupted production run and the best possible product quality in all areas. This allows us to manufacture even complex parts in-house. In the spirit of intense vertical integration, we manufacture all key components ourselves.

Our strengths include multi-skilled production technicians, an in-house hardening shop and various surface treatment technologies. From single-item production through to complex part geometries with several processing steps, our portfolio covers bar machining, grinding or panel processing. In addition, we cover wire eroding, honing, hardening, insertion, quenching and tempering or burnishing, laser welding and laser inscription.

Sales

Today our business group is represented in over 50 countries with over 760 employees. Our global presence means that many prestigious international companies have come to rely on our expertise.

Our international network has been established for many years. It is due to these reliable connections that we are able to react quickly and flexibly. Our partners support and advise directly on-site. Our specialists are on hand with their skills and experience.

Service

Our service department is the first port of call. Our service technicians will be pleased to help, whether over the phone, with remote maintenance or by travelling directly to site. An optional on-call service is also available.

Outside of business hours you can call our service hotline on +49 9621 / 371-371. Our service department will make immediate contact with you.

We are glad to provide additional services such as training courses, repairs or service and maintenance contracts.

We can carry out professional calibrations of your test equipment in our DakkS accredited calibration laboratory. Torque transducers can be calibrated with the highest accuracy in a range of 0.01 Nm to 500 Nm in accordance with standardised traceable calibration procedures. Furthermore, we can carry out tests with our mobile measurement instruments directly on your production line at your site. Our international service locations can be found on pages 6 and 7.

Thanks to our global presence we can provide these services to our customers anywhere in the world.
